

Part 4: Comparing TCP and UDP by filling in the following tables. Save your work (e.g., in an MS Word document), and upload it to your online git repo.

Task 1: Fill in the following table and provide reasons.

	TCP or UDP	Reasons
Reliability and Connection Establishment	TCP	TCP does a handshake (SYN, SYN-ACK, ACK) before sending data, but UDP just sends data with no handshake.
Data Integrity and Ordering	TCP	TCP uses sequence numbers to keep packets in order and resend lost ones.

Task 2: Identify the use Cases and Performance of TCP and UDP.

	TCP	UDP
Use cases	Web browsing, email, file downloads ,things that need to be accurate.	Video streaming, calls, online games, and things that need to be fast.
Performance	Slower because of the handshake and confirmations, but more reliable.	Faster with less overhead, but can lose some data.
